

Water and  
Wastewater Solutions  
**Economic Development for  
Native American Communities**

# Success depends on **Effective Water Management**

## Water is all we do.

Carollo Engineers is a full-service environmental engineering firm that has provided water and wastewater services across the United States for over 90 years. Our 1,400+ professionals work in over 50 offices across North America, giving us both a national and local presence. Our local engineers can meet the needs of nearby clients, knowing firsthand the issues they face, while being supported by a team of nationwide experts in their field. Our staff includes wastewater treatment, water treatment, civil, structural, electrical, mechanical, environmental, and instrumentation and control engineers, as well as scientists, planners, financial analysts, architects, and CAD designers.

Because our clients are our focus, our business, and our passion, Carollo has earned a reputation for technical innovation coupled with practical, value-added solutions that meet the needs of our clients over the long term.

## Working with Tribes

- Our Native American services group includes local, dedicated expert professional and technical water and wastewater staff with expertise in all aspects of planning, design, and construction.
- We practice discretion and preserve confidentiality regarding sensitive matters and information.
- We respect cultural values and traditions, and incorporate cultural or sacred components into planning, design, and construction.
- We support Native American communities through involvement with economic development and community planning committees.

**\$175M+**

In projects delivered to  
Indigenous clients.

**12**

Tribal enterprise  
planning and  
development supported  
by Carollo.

**15+**

Years working with  
tribal clients.

# Call to Action

Native American communities continue to face significant water challenges, but are also poised to play a leading role in the management of water resources throughout the United States.

We work with tribes to deliver effective water management solutions that allow their communities to thrive today and for generations to come. Tribal projects represent some of our most respected and rewarding work. Below is a sampling of our recent projects.

## Core Services

### Planning

Our planning services assess immediate and future needs, ensuring project scalability and sustainability.

### Water Resources

We manage water resources by evaluating water supply and the potential for beneficial reuse of treated wastewater, aiming for sustainable water management.

### Wastewater Treatment

Our wastewater treatment solutions enable clients to manage effluent for agriculture, golf courses, and groundwater replenishment, focusing on environmental stewardship.

### Surface Water Treatment

We offer surface water treatment to supplement groundwater, analyzing water quality and corrosion potential to introduce new, safe water sources.

# National Experience

## Areas of Expertise

- Water and wastewater treatment planning and detailed design.
- Water supply, planning, and management.
- Water reuse, recycling, and recharge facility design.
- Integrated water and wastewater master planning.
- Funding support and technical services for grant applications.
- Research and treatability evaluations.
- Pilot studies and disinfection by-product mitigation.
- Groundwater production and contaminant treatment facilities for arsenic, nitrate, TDS, etc.
- SCADA/PLC programming services.
- Construction management, start-up, and training services.
- Rate studies and financial services.
